

INSPIRE - 100

An Emergency Ventilator Device

Unmatched Affordability

Unmatched Remote Monitoring via WiFi

Unmatched Ease-of-use

No need for compressed Air Pipeline

Connect to Oxygen Cylinder or Concentrator

Full range of Mainstream Respiration Parameters

Breath Synchronization for Patient Comfort

Field Upgradeable

Rugged and Robust

Setting the Context

The Problem Statement

The Motivation

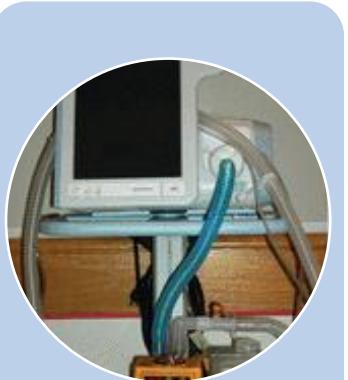

Evolution of Ventilators

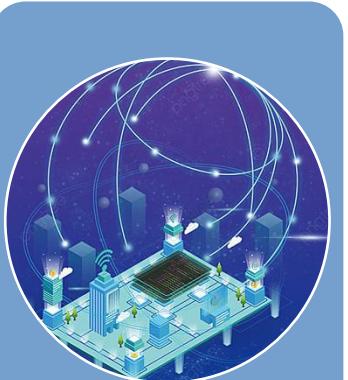

Iron Lung
Age

Pneumatic
Age

μ Controller
Age

Smart
“E”-Age

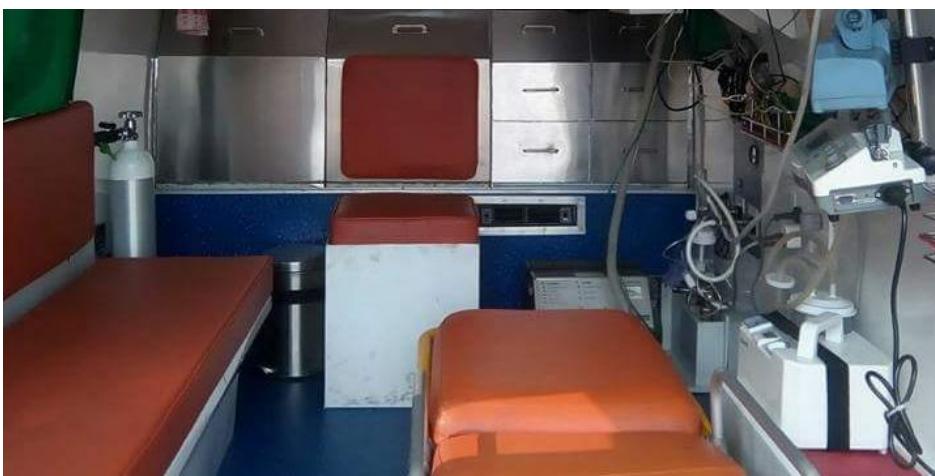

Most-used Ventilation Modes have not changed

- Volume and Pressure Control
- Control BPM, I/E, VT and PS
- Monitor pressures and flow
- Safety Alarm systems

Diminishing Returns from what has evolved ...

- Exotic Ventilation modes
- Multitude of Sensors
- Touch-screen Displays

The Problem Scarcity & Affordability

India has amongst the lowest per capita ICU beds in the World*

- 1.46 beds / 1000 people*
- 3.65 ICU beds / Lakh people*
- Only half of ICU beds are equipped with Ventilators
- A meagre 1.8 Ventilators for one lakh people*

ICU ventilators are expensive equipment

- Unaffordable in remote clinics

Ventilator Ambulances are

- Non-existent except in few urban centers,

* As per April 2020 Study by Center for Disease Dynamics, Economics & Policy at Princeton University, USA

Respiration Assist Devices

Categories – Usage and Pricing

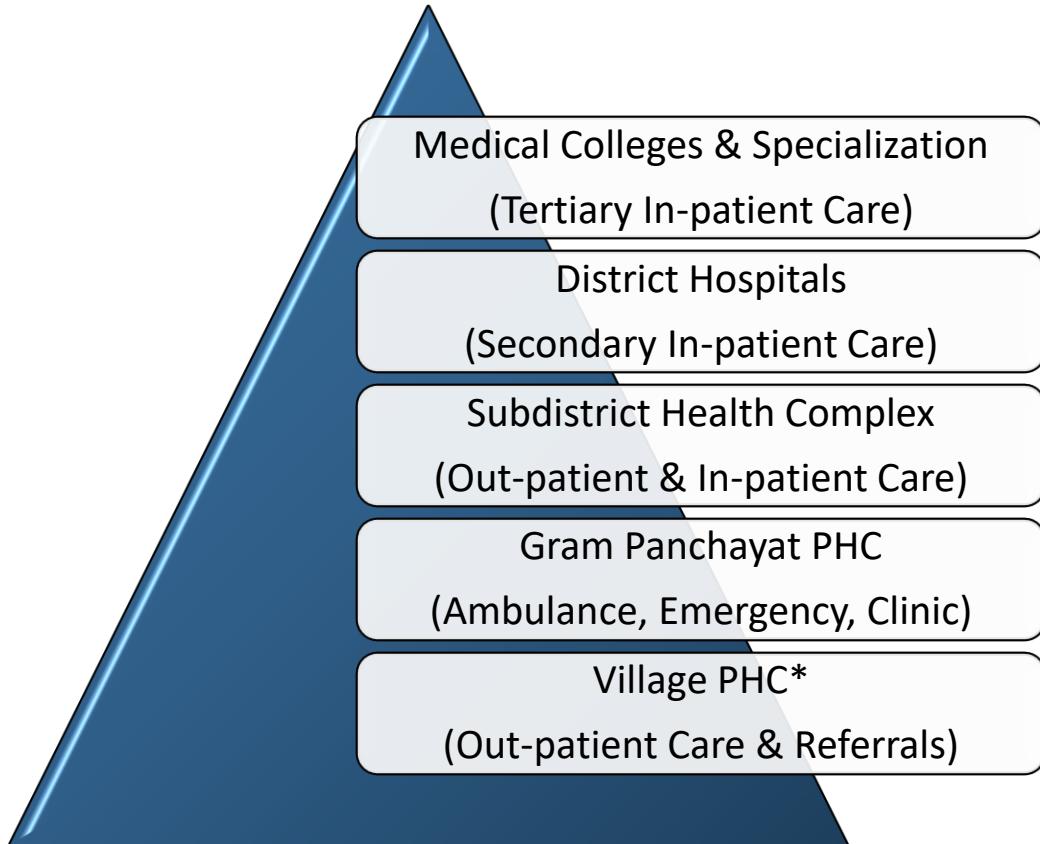

AFFORDABLE
feature set for PHC,
Small Clinic, and
Ambulance Use?

Big Hole

The Motivation

*As of 2021, there were **1,56,231 Primary Health Centers (PHCs)** in India with minimal infrastructure

Provide a robust, portable ventilator system for facilities that lack sophisticated hospital infrastructure

A system that requires minimum training and provides ventilation support from initiation to weaning with full range of mainstream parameters

A system that can supplement the scarce, expensive ICU Ventilators, sparing them for more complex cases

A system within the budget of the bottom of the pyramid at a fraction of the cost of an ICU Ventilator

A system to bridge the gap between nothing and an expensive ICU ventilator

A system that works in harsh uncontrolled environments and as a travel ventilator

INSPIRE-100 Details

System Components
Technical Details

Simple, Easy-to-read Front Control Panel

Prominent, Always-on Parameters Display

Menu-driven HMI

Prominent, Tactile Control Buttons

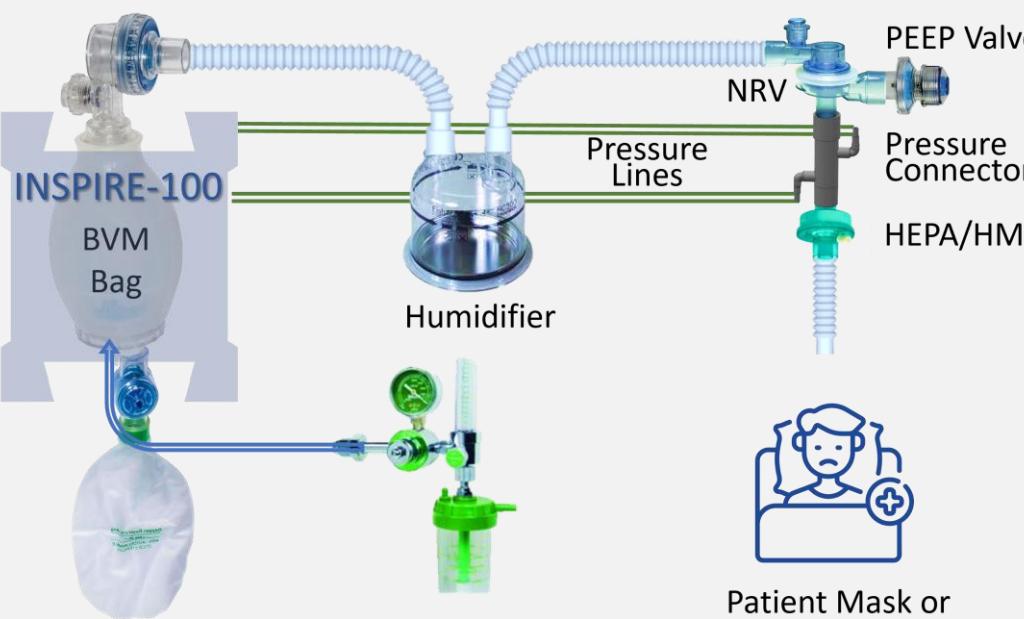

LCD Screen for Menu and Message Display

Colored LEDs show System state at-a-glance

Brightness and Buzzer Volume Controls

Backed by Comprehensive Remote Displays

Product Overview

Salient Features	Exceptionally Budget Friendly	Comprehensive Remote Monitoring	Easy-to-use Easy-to-train Rugged & Robust	Patient Comfort Mandatory Breaths synchronized with Patient-initiated Breaths No breath stacking
Breathing Circuit				

$$Q \propto \sqrt{\frac{(P_{G1} - P_{G2})}{(P_{G1} + P_{G2}) + 2 * Patmosphere}}$$

An important and necessary simplification is that P_{G1} and P_{G2} encountered in our system are of the order of tens of cmH₂O while Patmosphere is of the order of a thousand cmH₂O of pressure. At sea level, Patmosphere is approximately 1000 cmH₂O. Even at a altitude of 15,000 feet, Patmosphere is approximately 600 cmH₂O. On the one hand, the P_{G1} and P_{G2} in the system range from 1 cmH₂O to 60 cmH₂O.

Thus the $(P_{G1} + P_{G2})$ term is negligible compared to $2 * Patmosphere$, even since it is preceded by a square root. This equation can be simplified to the one below.

$$Q \propto \sqrt{\frac{(P_{G1} - P_{G2})}{(2 * Patmosphere)}}$$

Recalling Equation 2 from the theory section, this equation can be recast as below given that the orifice characteristics and pressure transmission are the same for every system.

$$Q = C * \sqrt{\frac{(P_{G1} - P_{G2})}{(Patmosphere)}} \quad (Eqn 2) \quad C = f(Re) \text{ Reynold's number}$$

At a given geographical location, Patmosphere is also a constant. So, the above equation further reduces to the one below.

$$Q = \left(\frac{C}{\sqrt{Patmosphere}} \right) * \sqrt{(P_{G1} - P_{G2})}$$

The equation needs further simplification to ease the computation burden of the square root computation for an inexpensive micro-controller. The constraints are as below.

Technical Specifications

Commonly used Ventilation Modes	
CMV	Continuous Mandatory Ventilation
ACV	Synchronized Assist Control Ventilation
SIMV	Synchronized Intermittent Mandatory Ventilation
PSV	Pressure Support Ventilation (BiPAP equivalent)

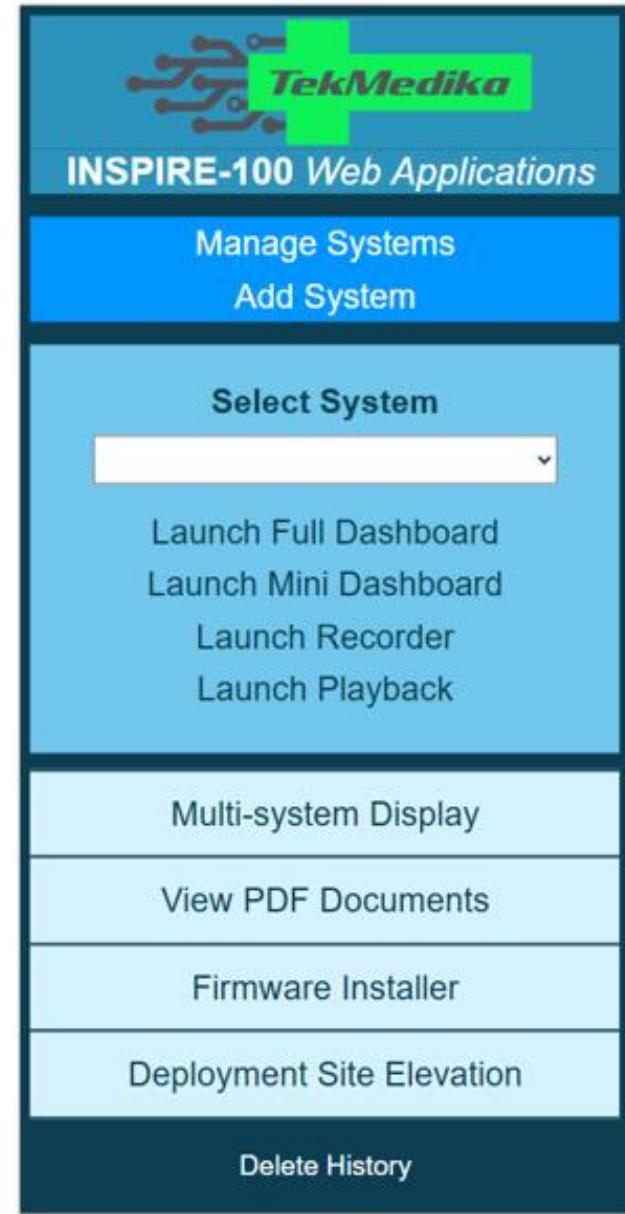

Full Set of Alarm Alerts		
Max Pressure	Pressure Leak	Pressure Loss
Airway Blockage	Coughing Hiccupping	Inconsistent Parameters
Extreme Parameters	System Temperature	And many more ...

Volume Controlled Breaths		
Tidal Volume 200 - 600 ml	Respiratory Rate 10 - 30 bpm	I:E Ratio 1:1 1:2 1:3
PEEP 4 - 15 cmH ₂ O	Max Pressure 15 - 60 cmH ₂ O	FiO₂ Support System Managed Externally Controlled

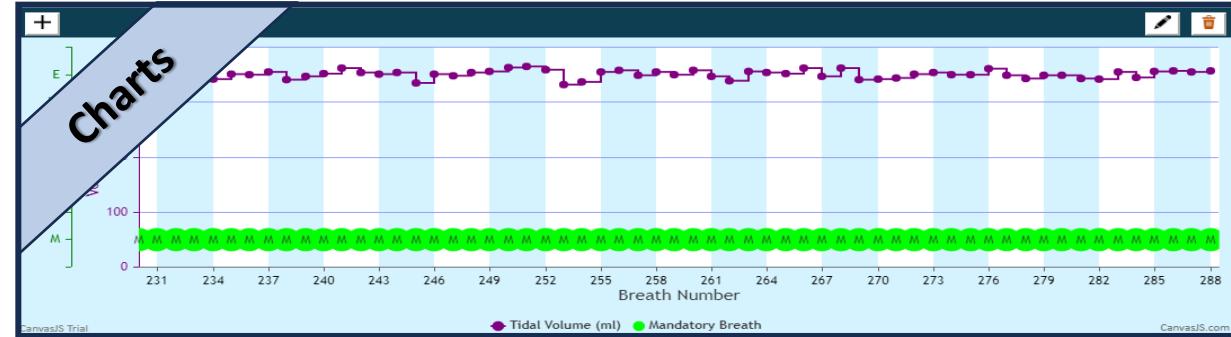

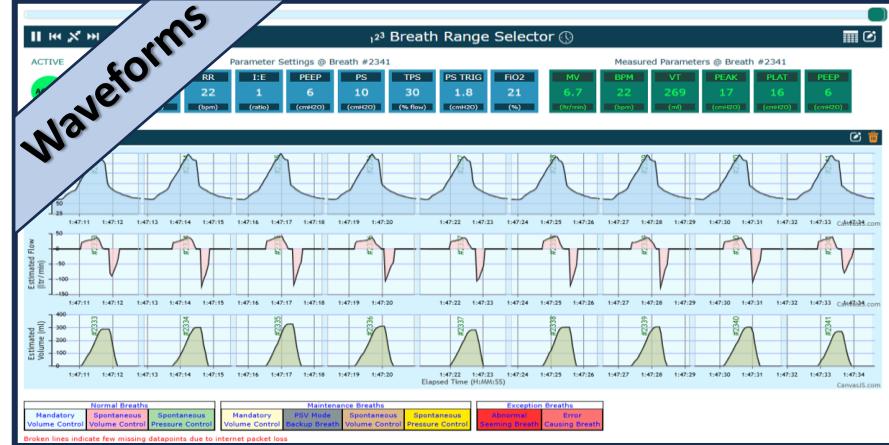

Pressure Supported Breaths	
Support Pressure	5 - 20 cmH ₂ O
Support Pressure Termination	Flow Triggered 10 – 60%

Elaborate Remote Monitoring

- ✓ Live Dashboard
- ✓ Detailed Breath Waveforms
- ✓ Charts for all Parameters
- ✓ Detailed Statistics
- ✓ System Alerts and Alarms
- ✓ Recording and Playback
- ✓ Multi-system Display

MODE VT/MV RR I:E PEEP PMAX PS TPS PS_TRIG FIO2 Breath# Date	SIMV 300 15 1:2 6 50 10 25 2 26 73 28-Dec-2025 13

Breath Synchronization

Synchronize Mandatory breaths with Spontaneous breaths Prevent breath stacking

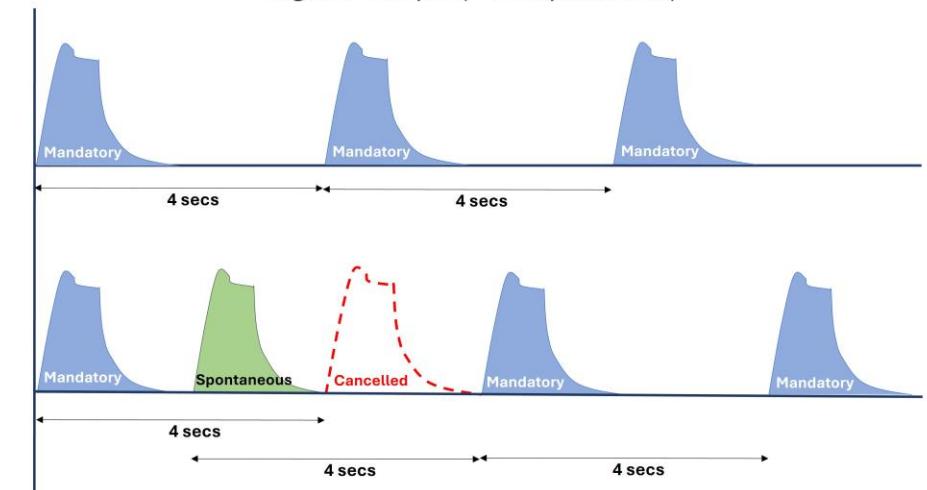

Breath Synchronization in SIMV Mode

e.g. RR=15 bpm (4 secs per breath)

Breath Synchronization in ACV Mode

e.g. RR=15 bpm (4 secs per breath)

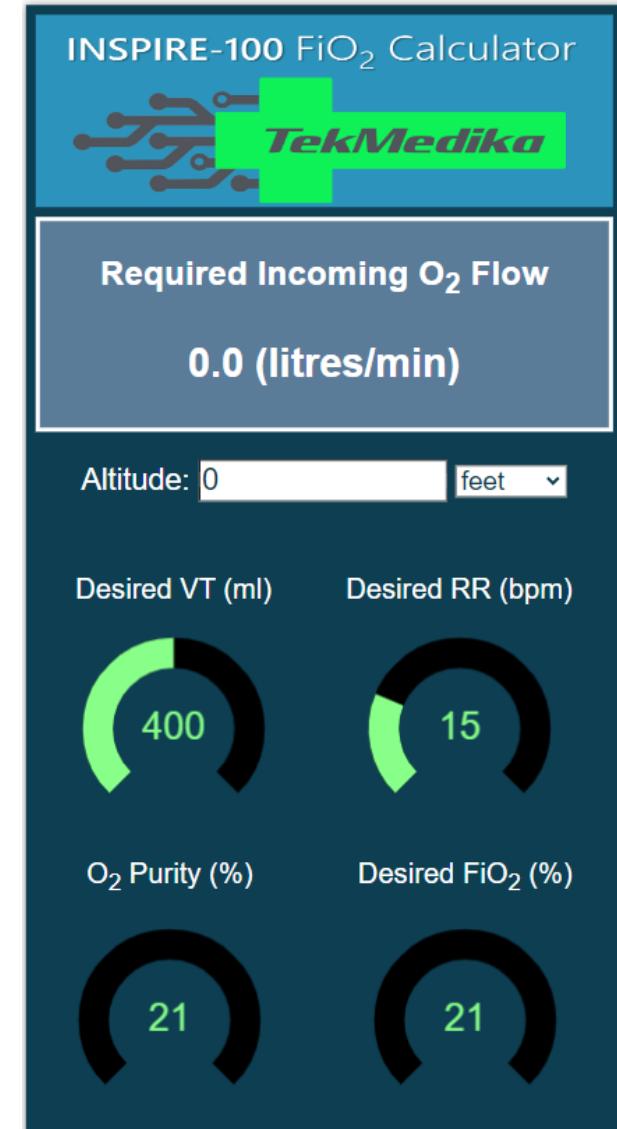

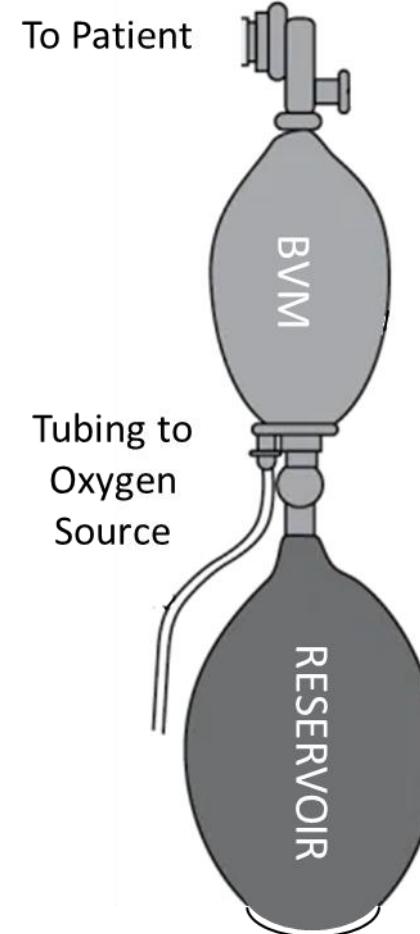

FiO_2 Settings

Without the Reservoir bag, FiO_2 delivered is the Atmospheric O_2 content at site

FiO_2 delivery with the Reservoir bag is mathematically modelled, calibrated and verified in the Lab to provide +/- 10% accuracy

Front-panel guides the user in setting the appropriate input O_2 flow rate from the O_2 source for a given FiO_2

The mathematical model provides for an O_2 concentrator as an O_2 source (purity < 100%)

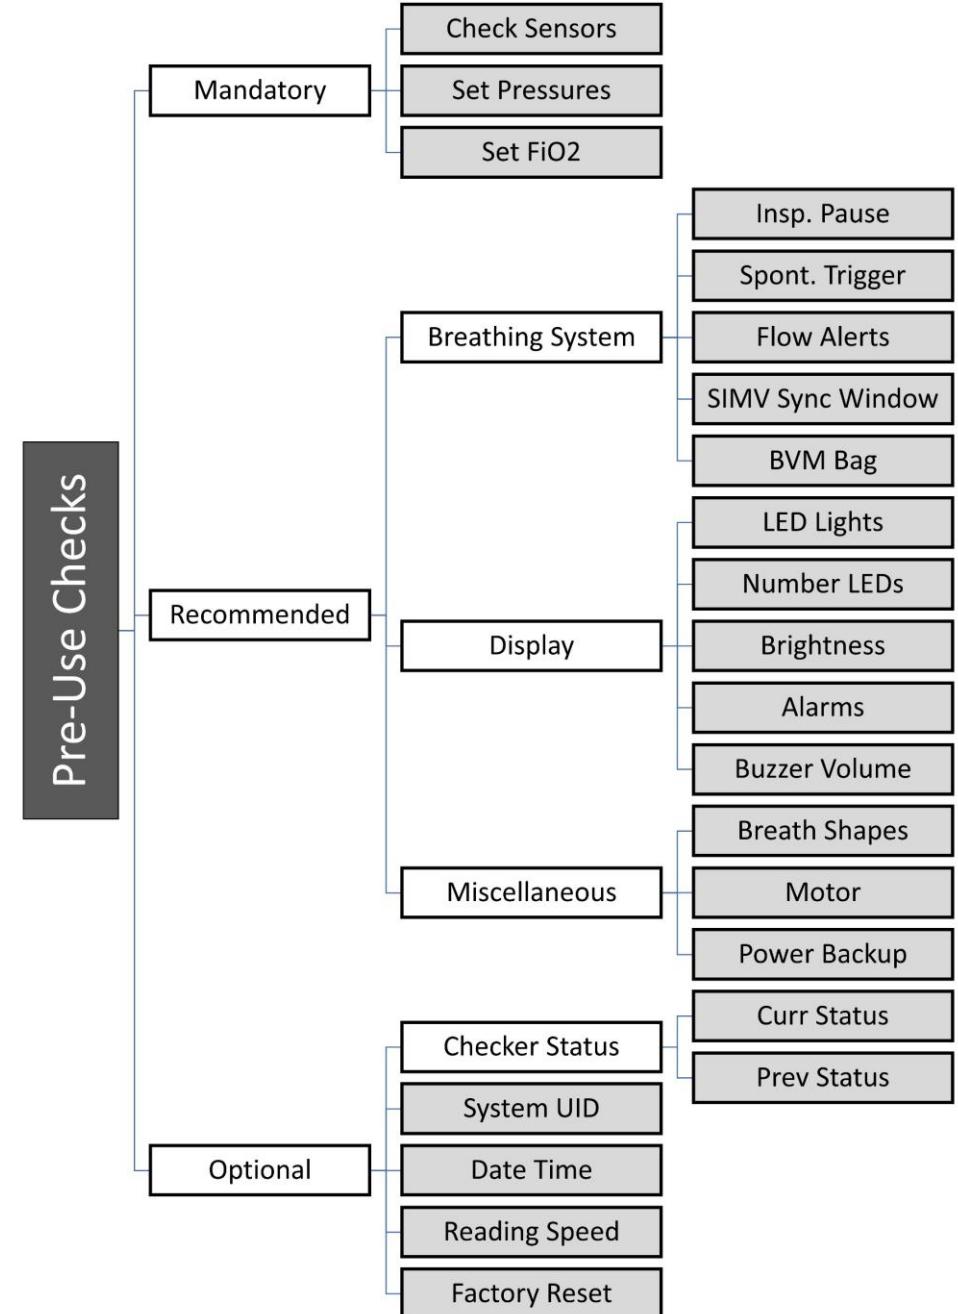

Enforcement of Pre-use checks

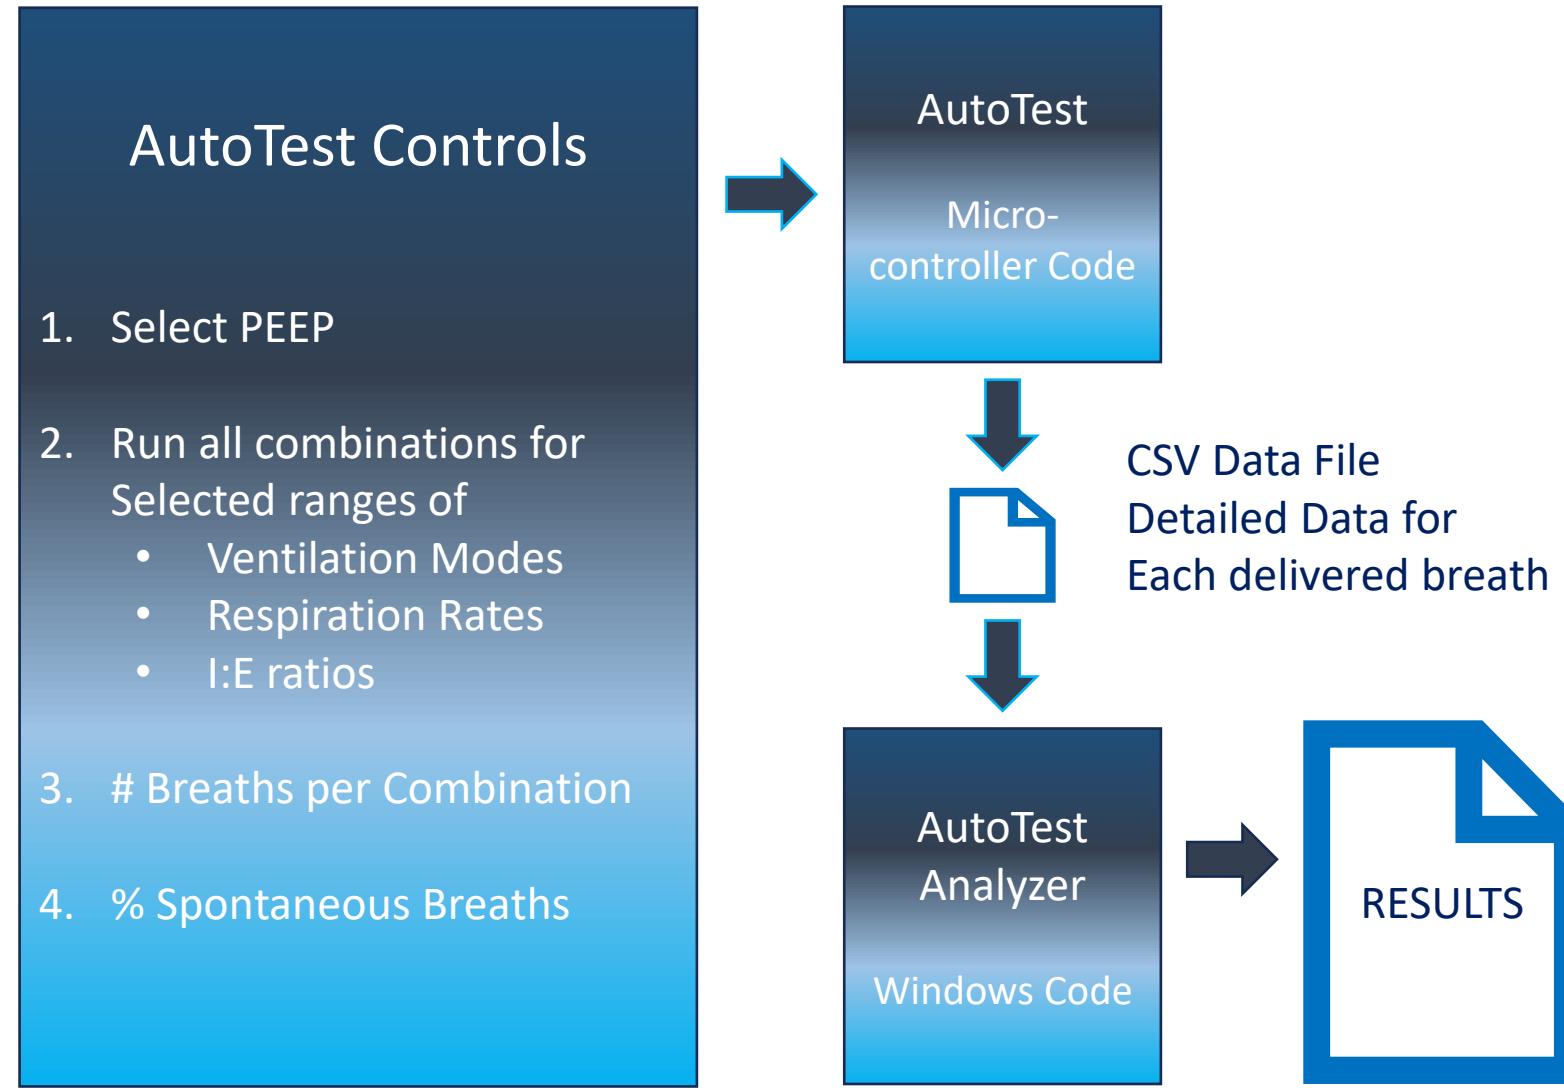

Maintenance Breaths till Alarm situation rectified

Alarms, Warnings and Notifications

- Max Pressure Alarm
- Pressure Leak Alarm
- Pressure Loss Alarm
- Airway Blockage Alarm
- System Temperature Alarm
- Sensor Failure Alarm
- Breathing Circuit Failure Alarm
- Detect coughing/hiccupping fits
- Inconsistent input parameters
- Extreme parameter combination warnings
- And many more ...

Extensive Automated Testing
